

Pediatric Hypothyroidism Referral Guidelines (age >1 yr)[#]

**If history of TBI, midline facial defects, brain irradiation, hypoxic brain injury, this would raise concern for central hypothyroidism. Contact on call provider to discuss case and for dosing recommendation prior to visit

*If positive antibodies, has underlying Hashimoto's thyroiditis. Typically, do not treat unless TSH rises >10 uIU/mL.

Please do not check TSH and Free T4 for evaluation of obesity with BMI above 85th %ile unless they have goiter or growth failure
